poten	Annex A (informative)	P
Anu	Battery charging - Temperature	ek An
Anbo An Jotek Anbotek	Safety and quality of battery cherging can be improved by sensing the battery temperature during charging. Most battery charger manufacturers set their chargers to have an optimal ambient temperature of 20 C to 25C.lower temperatures result in under charge, higher temperatures result in over charge. Whilst it is normal when building battery packs from Ni-Cad, Ni-Mh and Li-ion battery cells, to include temperature sensing, this is not always the case with valve regulated lead acid (VRLA) batteries. The main reason for including temperature sensing in VRLA batteries is to protect	Anbolek Anbolek Anboli
